Fit10 Mom — Product Requirements Document

Safe 10-Minute Workouts to Rebuild Strength & Energy After Pregnancy

PIVOT DRAFT • VERSION 2.1.0

APP IDENTIFIER com.fit10.app	TARGET AUDIENCE New mothers in India, 6 weeks – 2 years postpartum	LAUNCH LANGUAGES Hindi + English	PLATFORM Android (Jetpack Compose, MVVM)
MONETIZATION Freemium • Annual / Monthly / Lifetime	CONTENT CATALOG ≈40 Exercises • 12-Week Journey • 4 Phases	EXECUTION MODEL Offline-First, Private by Default	DOCUMENT DATE October 2026

1 Executive Summary & Product Vision

General home-workout apps are a crowded, ad-funded market. Fit10 Mom narrows the original Fit10 product to one underserved group: **women recovering after pregnancy**. These users have time in small pieces (nap windows), real physical considerations (C-section healing, abdominal separation, pelvic floor changes), and chronic tiredness. Generic apps ignore all three.

> **Core Value Proposition**
>
> "Safe 10-minute workouts to get your strength and energy back after baby. Designed with physiotherapists. In your language."

The existing Fit10 engine (adaptive difficulty, exercise swaps, interval player, offline storage) is reused and redirected: swaps become **postpartum-safe alternatives**, the adaptation engine responds to **sleep and energy**, and random workouts become a **guided 12-week recovery journey**. That journey is also the main reason to pay.

Why this can stand out

	Typical home-workout apps	Fit10 Mom
Audience	Everyone	**Women after pregnancy**
Safety	Generic exercises	**Physio-reviewed, C-section aware, red-flag screening**
Structure	Random workouts	**12-week journey in 4 phases**
Personalization	Fitness level only	**Weeks since birth, delivery type, daily sleep/energy**
Time	20–45 minutes	**10 minutes, pause anytime for the baby**
Language	English	**Hindi first, regional languages next**
Ads & privacy	Ads, data collected	**No ads, data stays on the phone**
Goal framing	Weight loss	**Energy, strength, feeling like yourself again**

2 Target Users & Personas

Persona	Situation	Pain Points	Fit10 Mom Solution
Priya, first-time mom (3 months postpartum, C-section)	At home with baby, joint family, Hindi-speaking, budget-conscious.	Afraid exercise will hurt the scar; low energy; no time; English apps feel foreign.	C-section-aware plan, Hindi voice coaching, 10-minute sessions during naps.
Ananya, working mom (8 months postpartum)	Back at office job, baby at daycare or with grandparents.	Back and neck pain from feeding and carrying; guilt about "losing herself".	Back & neck relief sessions, energy check-ins, progress that celebrates strength.
Sneha, second-time mom (14 months postpartum)	Two kids, used to be active before pregnancy.	Belly "doming", mild leaking when jumping; generic HIIT made it worse.	Abdominal separation self-check, pelvic floor progression, impact only when ready.

> **Positioning note**
>
> Marketing uses "new moms", not "housewives". It includes homemakers and working mothers alike and avoids a label many women find limiting.

3 Safety Framework (Non-Negotiable)

> **Launch blocker**
>
> All exercises, phase rules and screening questions must be reviewed and signed off by a qualified **women's health physiotherapist** before release. The app is a fitness product, not a medical device, and must never diagnose or replace clinical advice.

- **Medical clearance gate:** The 12-week journey starts only after the user confirms her doctor has cleared her for exercise. Guidance text: typically around 6 weeks after a vaginal birth and 8 weeks or more after a C-section, but the doctor's advice always wins.
- **Not for pregnancy:** Users who are currently pregnant are told the app is not designed for them.
- **Red-flag routing:** Pain, bleeding, pelvic heaviness, or leaking that worsens with exercise stops the session and shows "please consult your doctor or a women's health physiotherapist". No workout is offered that day.
- **Contraindication tags:** Every exercise carries tags (e.g. `DIASTASIS_LOAD`, `PELVIC_FLOOR_IMPACT`, `EARLY_CSECTION`, `PRONE_PRESSURE`). The engine filters exercises against the user's profile.
- **Excluded entirely:** Crunches and bicycle crunches (they load the abdominal wall in a way that can worsen separation).
- **Gated to Phase 4 after self-check:** Full planks, shoulder taps, jumping jacks, high knees, mountain climbers. A low-impact alternative is always one tap away.
- **Body-image care:** No "bounce back" language, no before/after weight framing, weight tracking off by default.

4 Functional Requirements

4.1 Onboarding & Safety Screening (OnboardingViewModel)

1. **Language:** Hindi or English (changeable later).
2. **Pregnancy status:** Currently pregnant → polite exit message.
3. **Baby's age:** Weeks or months since birth.
4. **Delivery type:** Vaginal, C-section, or prefer not to say (treated as C-section for safety).
5. **Doctor clearance:** Yes / Not yet / Not sure. "Not yet" unlocks only the gentle recovery basics.
6. **Body check:** Guided abdominal separation self-check (video) and pelvic floor symptom questions (leaking, heaviness).
7. **Pre-pregnancy activity level:** Inactive, somewhat active, very active.
8. **Goal:** More energy, core strength, back pain relief, overall fitness.
9. **Schedule:** Days per week and preferred reminder time (default: 5 days).

Output: a personalized plan summary ("You'll start in Phase 1: Reconnect, 3 weeks, 10 minutes a day"), immediately followed by the paywall (Section 9.2).

4.2 Daily Energy Check-In

Before each session: "How did you sleep?" (Badly / Okay / Well) and "Any pain or discomfort today?" (Yes → red-flag questions). A bad night switches the day's session to a gentler variant at the same phase. Logged locally to show patterns over time.

4.3 Adaptation Engine (PersonalizationEngine changes)

Rule	Specification	Change vs v1.0
Phase gating	Advance to the next phase only when the minimum weeks are done *and* the end-of-phase self-check passes (no pain, no leaking or heaviness, no doming). Users may repeat a phase without penalty.	Replaces the every-20-sessions deload gate.
Safety filter	Exclude exercises whose contraindication tags match the profile or the latest check-in.	New. Runs before scoring.
Energy adjustment	Bad sleep → shorter work intervals, longer rest, no new exercises that day.	New.
Overlap & volume guards	Existing –15 back-to-back and –20 weekly volume penalties kept.	Kept.
Auto-progression / regression	Driven by session ratings and completion, but capped at the current phase's ceiling.	Now bounded by phase.

4.4 Workout Player (WorkoutSessionEngine changes)

- **Baby-proof pause:** Session state is saved on pause and survives the app being closed. Resume within 2 hours continues where she left off; after that, offer "finish the last few exercises" or restart.
- **Hindi and English voice coaching** (pre-recorded cues) in addition to tones and haptics.
- **Quiet mode:** Haptics plus on-screen cues only, for when the baby is sleeping nearby.
- **Breathing cues** on screen for every core and pelvic floor exercise (exhale on effort).

4.5 Session Library

- **12-Week Recovery Journey** (main program, Section 5).
- **Quick Energy (5 min):** Standing, low-impact sessions for tired days.
- **Back & Neck Relief:** For feeding and carrying posture.
- **With Baby:** Babywearing squats, baby-on-chest bridges, playtime floor sessions.
- **Mom Strength (after week 12):** Ongoing rotating sessions so the subscription keeps delivering value.

4.6 Progress & Motivation

- Streaks that forgive missed days (a baby is unpredictable): 5 sessions per week counts as a full week.

- Strength milestones ("first incline push-up", "Phase 2 complete"), energy trend from check-ins, optional private progress photos stored only on the device.
- Shareable milestone cards for WhatsApp and Instagram (no health details on the card). This doubles as organic marketing.

5 Content: The 12-Week Recovery Journey

Four 3-week phases, 5 sessions of 10 minutes per week (60 sessions in total). The schedule is a guideline; phase gating (4.3) decides progression.

Phase	Weeks	Focus	Example Exercises
1 · RECONNECT	1–3	Breathing, pelvic floor, posture, gentle mobility	360° breathing, pelvic floor activation (quick and long holds), core connection breath, heel slides, pelvic tilts, clamshells, cat-cow, child's pose, neck & shoulder release
2 · REBUILD CORE	4–6	Deep core and glutes, light upper body	Glute bridge, kneeling bird dog, modified dead bug (toe taps), side-lying leg lifts, wall push-up, sit-to-stand from chair, side plank from knees
3 · STRENGTH	7–9	Full-body strength for daily mom life (lifting, carrying)	Bodyweight squat, reverse lunge, supported split squat, incline push-up, glute bridge march, single-leg bridge, wall sit, suitcase carry (water bottle or baby bag), babywearing squat
4 · ENERGY	10–12	Low-impact cardio, then impact only if ready	Marching, step-touch, step jacks, incline plank, slow incline mountain climbers; jumping jacks and high knees only after pelvic floor readiness check

Catalog size: about 40 exercises. Roughly 14 safe exercises from the v1.0 catalog are reused (squats, reverse lunges, glute bridges, bridge march, wall sit, bird dog, cat-cow, child's pose, arm circles, and others); about 26 are new.

> **Video content**
>
> Stock preview clips in `scratch_videos/` (e.g. iStock "adpp" files) are not licensed for release. Shoot original videos with a female trainer in modest workout clothing, ideally a mother herself. This is also stronger branding.

6 UI & Visual Design

The UI should feel calm, warm and capable: a tired mom should understand every screen at a glance and use it one-handed while holding a baby.

Color palette: Plum (light and dark)

Token	Light	Dark	Use
`primary` / `onPrimary`	#7E3A70 / #FFFFFF	#E6A8D8 / #3E1638	Main buttons, progress, selected states
`primaryContainer` / on	#F6E9F3 / #5A2550	#34202F / #F8E8F4	Today's session card, selected chips
`background`	#FDF8FC	#120E12	Screen background (warm near-black at night, never pure black)
`surface`	#FFFFFF	#1C161B	Cards and sheets
`onSurface` / `onSurfaceVariant`	#26182A / #6B5A68	#F4ECF2 / #B6A6B2	Main text / supporting text
`outlineVariant`	#EBDCE7	#33282F	Hairline borders, inactive tracks

- **Appearance setting:** System (default), Light, Dark. Dark mode is tuned for night feeds: low glare, soft pink accents.
- **No hardcoded colors in screens.** Every color comes from the theme so both modes always work. Extra accents (streak, rest, timer) get light and dark values through a theme-provided `Fit10ExtendedColors`.
- **Contrast:** text and buttons meet WCAG AA (4.5:1) in both modes.
- **Palette validation:** show Plum, Rose and Lavender to beta users; later A/B test store screenshots with Play store listing experiments.

Layout & components

- Edge-to-edge screens, large rounded cards (20dp), generous spacing, sentence-case copy.
- Primary actions in the bottom third of the screen for one-handed use; touch targets of at least 48dp.
- Shared-element transition: today's session card expands into the workout player.
- Skeleton shimmer instead of spinners; animated bottom navigation icons.
- Hindi typography with Noto Sans Devanagari; layouts tested at 200% font scale and with TalkBack.

7 Motion & Haptics

Motion should feel alive but calm. Every press responds instantly, celebrations feel warm, and nothing is loud or hyperactive.

Moment	Animation	Haptic	Implementation
Tap a choice	Springy bounce and color morph	Light tick	`spring()`, `HapticFeedbackConstants.CLOCK_TICK`
Press Start	Button squish; card expands into player	Confirm	`SharedTransitionLayout`, `CONFIRM`
Breathing guide	Circle grows and shrinks with breath	None	`rememberInfiniteTransition`
Timer	Smooth ring sweep	Ticks at 3-2-1, double pulse at halfway	`WorkoutFeedbackCoordinator` waveforms
Pause	"Baby needs you?" card slides up	Soft press	`AnimatedVisibility`
Session complete	Checkmark draws, confetti, stats count up	Celebration pattern	Lottie or Canvas particles
Phase unlocked	Badge pops in with glow	Strong success	Lottie
Red-flag safety screen	No playful motion	Single firm pulse	`REJECT`

- **Settings:** haptics on/off; quiet mode (haptics and on-screen cues only while the baby sleeps).
- **Reduce motion:** respect Android's "Remove animations" setting; replace motion with simple fades.
- **Performance:** UI animations at 60 fps, most transitions 200–400 ms, no jank on low-end devices (2–3 GB RAM).

8 Daily Retention System

Goal: a reason to open the app every day, and a habit that survives sleepless nights and missed days.

Feature	How it works	Retention job
First win on day 0	Safety questions first, everything else later. Onboarding ends with a 2-minute breathing session.	Activation
Daily check-in	10 seconds: sleep, energy, mood. Counts as showing up even without a workout.	Daily open
"Even 3 minutes counts"	Short fallback session on bad days.	Avoid all-or-nothing drop-off
Smart reminder	Learns when she usually works out (often nap time). Max 1 notification per day, quiet hours respected, never guilt-based.	Habit trigger
Home-screen widget	Shows today's session with one-tap start (Jetpack Glance).	Daily visibility
Forgiving streaks	5 sessions a week counts as a full week, plus one free "baby day" skip.	Motivation without shame
Welcome back	After 3 missed days: warm message and a gentler session. No broken-streak shaming.	Win-back
Sunday recap	Sessions done, energy trend, "you're stronger than last week".	Visible progress
Baby-age moments	"Baby is 4 months old! Try the babywearing squat session."	Personal reason to return
Weekly new session	One new Pro session every week.	Freshness, renewal

9 Revenue Model & Monetization

Principle: **safety basics are free; the guided transformation is paid.** No ads. Ads would undermine trust with this audience and the privacy promise.

9.1 Pricing (Google Play Billing)

Plan	Price (INR)	Terms	Why it exists
Free	₹0	No card required.	Onboarding, safety screening, Phase 1 Week 1, daily breathing & pelvic floor routine, one Quick Energy session, reminders. Builds trust and the habit.
Annual (Recommended)	**₹699 / year**	7-day free trial, auto-renews. About ₹58 per month.	Main revenue driver. Covers the full 12-week journey plus Mom Strength afterwards.
Monthly	₹149 / month	Cancel anytime.	For users who don't want to commit. Makes the annual plan look like good value.
Lifetime	₹1,499 one-time	In-app product, no renewal.	Many Indian users avoid subscriptions. Also easy for a husband or family member to buy as a gift on her phone.

Pro includes: the full 12-week journey (Phases 1–4), Mom Strength library, Back & Neck Relief, With Baby sessions, energy-adaptive sessions, unlimited safe swaps, milestones and progress history. Language and safety features are never behind the paywall.

Later experiment: a prepaid "12-Week Journey Pass" (₹399, no auto-renew) using Play's prepaid plans, A/B tested against the monthly plan.

9.2 Paywall Placement

- **After onboarding:** Show her personalized plan, then the annual trial offer, with a clear "Continue free" option.
- **End of Phase 1 Week 1:** Celebrate the first week, then "unlock the rest of your journey". This is the highest-intent moment.
- **Contextual:** Tapping a Pro session opens the existing `ContextualUpsellSheet`.
- Copy is warm and honest. No countdown timers, fake discounts, or shame-based messaging.

9.3 Additional Revenue Streams (after product–market fit)

Stream	How it works	Timing
Physio consultations	In-app booking of video consults with women's health physiotherapists (around ₹499–999). Fit10 takes a 20–25% commission. Needs a backend and a Play Payments policy review.	v1.2
Clinic & hospital partners	Gynecologists and maternity hospitals hand out QR cards with extended-trial offers; clinics can buy bulk access codes (within Play promo code limits).	v1.3
Nutrition add-on	Postpartum and breastfeeding-friendly Indian meal plans, reviewed by a dietitian. Included in Pro or sold as an add-on (to be tested).	v1.3
Employer programs	Companies offer Fit10 Mom to employees returning from maternity leave (B2B wellness).	v2.0

9.4 Illustrative Revenue Scenario

All conversion rates below are **assumptions to validate in beta**, not benchmarks. Per 10,000 installs per month:

Step	Assumption	Users	Gross (INR)
Start annual trial	12% of installs	1,200	—
Trial → paid annual (₹699)	30% of trials	360	₹2,51,640
Monthly plan, first month (₹149)	1% of installs	100	₹14,900
Lifetime (₹1,499)	0.5% of installs	50	₹74,950
Total first-purchase revenue		510 payers	**≈ ₹3.41 lakh**
After Google Play fee (15%)			**≈ ₹2.90 lakh**

That is about **₹29 net per install** from first purchases alone, before monthly renewals and second-year annual renewals. Paid marketing must stay below this cost per install to be profitable on first purchase, so organic and referral channels (Section 11) are essential early on.

10 Technical Changes to the Existing App

Area	Change
`OnboardingViewModel`	New 9-step flow (4.1), clearance and red-flag branches.
`PersonalizationEngine`	Phase gating, safety filter, energy adjustment; remove the deload gate.
`WorkoutSessionEngine`	Persist session state for resume after process death; voice cue playback; quiet mode.
Room schema	`ExerciseEntity` gains contraindication tags and minimum phase. New `PostpartumProfileEntity`, `DailyCheckInEntity`, `PhaseProgressEntity`. Migration from v1.0 schema.
Seed catalogs	Rewrite `ExerciseCatalog`, `WorkoutCatalog`, `ProgramCatalog` for the journey and session library.
`BillingRepository`	Add annual and monthly subscription base plans (trial offer on annual) and a lifetime in-app product. Keep `EntitlementVerifier` design from ADR 001.
Localization	Full Hindi strings and recorded Hindi voice cues; regional languages in v1.1.
Privacy & compliance	Explicit consent for health data under India's Digital Personal Data Protection Act, 2023; one-tap "delete all my data"; existing encrypted database (`DatabaseKeyManager`); Google Play Health apps declaration.
Theme	Plum light and dark palettes in `Color.kt`; `Fit10ExtendedColors` for accents; appearance setting (System / Light / Dark) stored in DataStore; replace ~500 hardcoded colors in screens with theme tokens.
Haptics & motion	`Fit10Haptics` helper for UI taps; new waveform patterns in `WorkoutFeedbackCoordinator`; haptics and reduce-motion settings; Lottie for celebrations.
Retention features	Daily check-in, Glance home-screen widget, smart reminder scheduling (WorkManager), forgiving streak logic, weekly recap notification.

11 Acquisition & Growth

Channel	How	Cost
Instagram Reels / YouTube Shorts (Hindi)	3 per week: safe exercises, myths ("Can I exercise after a C-section?"), real mom stories.	Free, needs time
Mom micro-influencers	10k–100k followers. Free lifetime Pro plus a referral code; pay per install later.	Low
Referral loop	Shareable milestone card; give 1 month free, get 1 month free (Play subscription offers).	Built in
Doctors & clinics	QR cards at gynecologists, hospitals, lactation consultants and prenatal classes, with an extended trial.	Printing
Mom communities	WhatsApp and Facebook mom groups, parenting forums. Helpful, never spammy.	Free
Store listing (ASO)	Hindi listing; keywords like "postpartum workout", "C-section exercise", "delivery ke baad exercise".	Free
Paid Meta ads	Only after retention is proven. Cost per install must stay below net revenue per install (≈ ₹29, Section 9.4 scenario).	Paid

> **Growth loop**
> Mom finishes a milestone → shares the card on WhatsApp → a friend installs with 1 month free → both are rewarded → the friend reaches her own milestone and shares.

Sequence: (1) closed beta with 100–200 moms and fix drop-off points; (2) launch with the retention features in Section 8; (3) organic content and referrals, then influencers and clinics, paid ads last.

12 Key Metrics & Targets

≥ 3 / week
NORTH STAR
Share of active moms completing 3 or more sessions per week.

≥ 60%
DAY-0 ACTIVATION
Installs that finish onboarding and complete a first session on day one.

40 / 25 / 12%
D1 / D7 / D30 RETENTION
Ambitious for fitness apps; the check-in, widget and forgiving streaks must earn it.

≥ 30%
TRIAL → PAID
Annual trial conversion. Install → trial target: ≥ 10%.

≥ 5%
INSTALL → PAYING
All plans combined, within 30 days of install.

≥ 40%
PHASE 1 COMPLETION
Paying users who complete Phase 1, the leading indicator of renewal.

≥ 15%
REFERRAL RATE
Active users who share a milestone card or invite at least once.

< ₹29
COST PER INSTALL
Blended acquisition cost, kept below net revenue per install.

0
INJURY REPORTS
Track red-flag routing and safety feedback; review weekly with the physio partner.

13 Roadmap

- **Pre-launch (6–8 weeks):** Sign a physio partner, rewrite content, film original videos, closed beta with 100–200 moms. Test pricing and measure retention before a public launch.
- **v1.0 Launch:** Hindi + English, 12-week journey, Annual / Monthly / Lifetime plans.
- **v1.1:** Telugu, Tamil, Marathi, Bengali; prepaid 12-Week Pass experiment.
- **v1.2:** Physio consultation booking (first backend component).
- **v1.3:** Nutrition plans; clinic partner program.
- **v1.4:** Moderated mom community; Health Connect sync (steps, sleep).

14 Risks & Mitigations

Risk	Mitigation
User injury / liability	Physio sign-off, clearance gate, red-flag routing, clear disclaimers, conservative defaults.
Low willingness to pay	Lifetime and prepaid options, family-gift framing, generous but limited free tier, test prices in beta.
High acquisition cost	Organic content, referrals and clinic partnerships before paid ads.
Churn after 12 weeks	Mom Strength library, new monthly sessions, back-care and energy content.
Play Store policy	Health apps declaration, accurate store claims (no medical promises), Play Billing for all digital content.
Body-image harm	Strength- and energy-focused progress, weight tracking off by default, careful copy review.
